

DEPRECATED - Old Power Automate Architecture

Status: Do NOT use. Historical reference only.

This file documents the **old Power Automate + Copilot Studio** architecture that has been deprecated and replaced.

Why This Was Deprecated

The old approach attempted to use **Power Automate** as a bridge between Teams and IsPilot API:

- ✗ Token type mismatch (Microsoft Bearer ≠ Google identity tokens)
- ✗ Cross-cloud authentication complexity (Azure ↔ GCP)
- ✗ No native Teams protocol handling
- ✗ Missing session context management
- ✗ Limited to Power Automate quotas and constraints

See [../docs/ARCHITECTURE_RESET_TEAMS_SDK.md](#) for complete analysis.

Current Architecture (Use This Instead)

The project has been reset to use:

1. **Microsoft 365 Agents SDK** (instead of Power Automate)
 2. **Teams Bridge** service (instead of direct Copilot Studio)
 3. **Azure Bot Service** (instead of Power Automate flows)
-

Documentation References

For current implementation, refer to:

Purpose	File
Quick Start & Architecture	README.md
5-Phase Implementation Plan	NEXT_STEPS.md
Complete Setup Guide	../docs/TEAMS_SDK_INTEGRATION.md
Architecture Decision Rationale	../docs/ARCHITECTURE_RESET_TEAMS_SDK.md
API Documentation	../ispilot-api/README.md
Project Status	../WORK_CHECKPOINT.md

Key Differences

Aspect	Old Approach	New Approach
Technology	Power Automate	MS 365 Agents SDK + FastAPI
Integration	Direct Copilot Studio	Azure Bot Service → Teams Bridge
Authentication	Manual in Power Automate	Built-in Azure JWT + Google identity tokens
Session Context	Limited	Full session persistence via conversation_id
Scalability	Power Automate quotas	Cloud Run auto-scaling
Deployment	Power Automate cloud	Cloud Run + Dockerfile
Testing	Manual in Power Automate	Local uvicorn + cloud integration tests

For Historical Reference

Old files that have been replaced:

- ~~app.py~~ → main.py (MS 365 SDK implementation)
- ~~COPILOT_STUDIO_SETUP.md~~ → README.md + NEXT_STEPS.md
- ~~MIGRATION_GUIDE.md~~ → DEPRECATED.md (this file)
- ~~power-automate-flow-template.json~~ (removed)

Need to Understand the Old Approach?

This file keeps the deprecated approach documented for historical reference. If you need to:

- **Understand why we changed:** See [../docs/ARCHITECTURE_RESET_TEAMS_SDK.md](#)
- **See rollback options:** Documented in architecture file above
- **Reference old patterns:** Search git history for Power Automate branch

Last Updated: 2026-09-01

Deprecated Since: 2026-09-01

Migration Status: ☒ Complete - All new development uses Teams SDK approach
